Disclaimer

The information presented and contained within this document was voluntarily provided to the authors by representatives of the responding 50 states identified in Appendix B of this report. As described in the following chapters, the authors have attempted as possible to verify the information provided for accuracy, currency, completeness and consistency. The tables, graphics, analysis and conclusions presented in this document were developed by the authors and are based upon information provided by each state during this or previous data collection efforts by the authors. The individual state profiles in Appendix C were approved by the respective 50 state foresters and the leading state representative identified in each profile. The profiles provide readers with the capability to develop their own conclusions. However, anyone needing clarification or additional information regarding a specific state should contact that state directly, and specifically the state forester or the individual(s) named in Appendix C; with contact information available in each profile.
